

Cybersecurity Base Layer Bundle

Cybersecurity Base Layer Bundle Overview	2
NINJIO Security Awareness Training	3
Keeper Password Management	4
DNSFilter DNS filtering	6
Datto SaaS Protection Cloud Backup & Email Security	7
Newmind Group Can Help	8

Cybersecurity Base Layer Bundle Overview

Products	Category	Cost (a la carte)
Keeper Enterprise	Password Management	\$5/user/mo
DNSFilter	DNS Filtering	\$2.50/user/mo
NINJIO	Security Awareness Training	\$3.50/user/mo
Datto SaaS Protection	Cloud Backup	\$4/user/mo
Datto SaaS Defense for Office 365	Cloud Backup, Email Security	\$9/user/mo

Base Layer Bundle:

- **Keeper Enterprise** for password management
- **DNSFilter** for DNS and content filtering protection on Windows devices and at the firewall level
- **NINJIO** for Security Awareness Training and Phishing Simulation
- **Datto SaaS Protection** for Google Workspace and O365 Backup

\$12/user/month for Google Workspace environments

\$14/user/month for Microsoft 365 environments (includes Datto SaaS Defense)

Why bundle?

This bundle was curated by Newmind Group's engineer team to include the greatest amount of added protection for the lowest cost per member of your team. We believe that **password management, DNS filtering, security awareness training, and Google Workspace and Microsoft O365 backup** combine to provide a massive added layer of protection from **attacks, accidents, and human error**.

Moreover, they cover a set of priority areas that many businesses typically haven't covered in their existing security plans.

The following pages give some high level information about each of the tools. **For a more in-depth look at each, or to schedule a demo to see them in action, please contact us.**

NINJIO | Security Awareness Training

NINJIO is cybersecurity awareness training for employees and executives that uses engaging 3-4 minute episodes to help organizations, team members, and their families to become more prepared to spot security threats, including phishing and ransomware.

Here is a link to a sample training video: [Ransomware is Everywhere - Avoiding Ransomware: NINJIO S3E6 Trailer](#)

Ninjio provides:

- Ongoing security training delivered to your inbox
- Reports to track team participation and performance
- Simulated phishing attacks
- Free licenses for friends and family

ANIMATED EPISODES

3-4 minutes long, released every month

REAL BREACHES

Security awareness lessons based on real companies who've suffered a significant breach

ENGAGE VIEWERS

We emotionally connect with your learner in the first scene of every episode

HOLLYWOOD STORYTELLING

Each episode is written by a former writer of CSI: NY

FRIENDS & FAMILY USE RIGHTS

Add 7 friends and family at no cost

GAMIFIED LEADERBOARD

Competition encourages engagement

Keeper | Password Management

Keeper remembers your passwords so you don't have to. Today, almost a quarter of all Americans use password managers, and among password management providers Keeper holds the longest-running SOC2 and ISO27001 certifications in the security industry.

Fast and easy set up

Easy to set up and roll out to your employees on every device they use.

Create and share strong passwords

Creates high-strength, random passwords and lets you securely share them on demand.

Autofill passwords with KeeperFill

Quickly autofill your passwords into websites or apps logins.

Free Family Plan

When you buy Keeper Business, each team member gains access to a free Keeper Family Plan.

Easy to use

Simple design that is a joy to use on every device and web browser.

Unlimited devices and peace of mind

Each employee gets Keeper on unlimited devices for complete, company-wide protection.

World-class training and support

The Keeper Team is available to help 24/7.

Best-in-class security

Keeper utilizes proprietary zero-trust and zero-knowledge security architecture with full end-to-end encryption.

Keeper Provides:

- **Security Policies** - Keeper's role-based enforcement policies provide your organization with the flexibility to customize your solution to meet your specific needs.
- **Reporting** - Reports include audits for user activity, user status, policies setting changes, access requests, security reports, and shared folder reports.
- **Browser Extension** - The Keeper Vault extension runs in all major browsers. Keeper supports Mac, Windows, and Linux, and has apps for Android, iOS, and Windows Phone.
- **Shared Folders & User Groups** - Organize and share logins and notes seamlessly and securely among groups via shared folders. Administrators can assign policies and shared folders to users according to their roles and teams.
- **Two-Factor Authentication (2FA)** - Keeper 2FA adds extra layers of security by prompting you with an authentication code delivered by SMS, common Authenticator apps, or [KeeperDNA](#) which provides an instant 2FA token by automatically detecting your nearby connected devices.

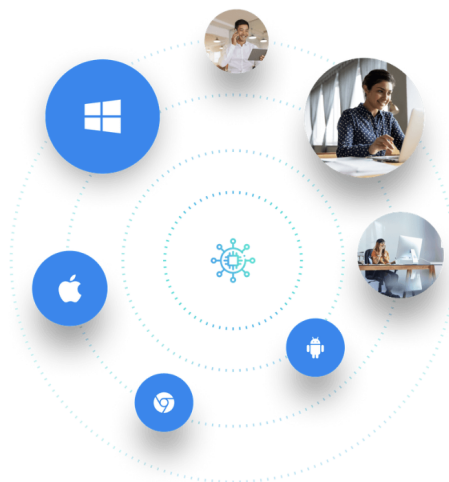

DNSFilter | DNS filtering

With DNS filtering, when you type in a website's address, a filtering process takes place before that page is displayed. The filter protects all devices connected to your office network, and is able to block or limit the functionality of that page, depending on a number of factors set up by you:

- Malicious content
- Potentially threatening content
- Illegal content
- Content not appropriate for work
- And more

DNSFilter Provides:

- **Content Filtering** - DNSFilter includes over 30 built-in categories that you can use to filter the types of sites that can be accessed from your network.
- **Detailed Reports** - View and export network activity and security reports in our dashboard, or delve into detailed logs for even more actionable data.
- **Real-Time Updates** - An industry first: DNSFilter is the only DNS threat protection providing real-time domain analysis via AI, meaning we protect you from more threats.
- **On-site and Off-site Protection** - DNSFilter is available on Windows, MacOS, iOS, Android, and ChromeOS. It can also be configured on the office network to protect your entire business network, including your guest wifi.

Datto SaaS Protection | Cloud Backup & Email Security

Datto SaaS is a cloud-to-cloud backup solution, offering comprehensive backup and recovery for cloud data that lives in Microsoft 365 and Google Workspace.

There's a common misconception that if something is deleted permanently from your personal cloud storage (Google Drive, or OneDrive, etc), that your vendor has a backup on file and can restore that business data to you when needed. This is unfortunately not the case—**when a file or email gets deleted (by accident, attack, or disgruntled employee), that file is gone for good, and not backed up anywhere.** Datto SaaS Protection is a way to mediate that by backing up data that your organization is storing in the cloud.

Datto SaaS Protection/Defense provides backup and recovery for the following apps:

Google Workspace

- Gmail
- Google Drive
- Calendar
- Contacts
- Shared Drives

Microsoft 365

- Exchange
- OneDrive
- SharePoint
- Teams
- Task

How Datto SaaS Protection Works:

- Automatic 3x daily backup
- Flexible data retention
- One click restore at file or folder level
- Restore to original or other user
- Point-in-time restore and export
- Non-destructive restore
- Advanced search
- Advanced Threat Protection and Spam Filtering for O365
(Datto SaaS Defense for O365)

Newmind Group Can Help

Newmind Group is experienced in helping organizations navigate cybersecurity for the first time, or shoring up gaps in an existing cybersecurity environment. We can consult on the tools mentioned above, as well as other cybersecurity tools, including:

- Server Backup
- Next Gen Antivirus
- Patch Management
- Email Security
- Secure Remote Access
- Vulnerability Assessments
- Endpoint Detection and Response
- Data Encryption
